

Direct-Address Tables

Direct-Address Tables

Hashing with chaining

insertion	$O(1)$	insert at beginning of list
-----------	--------	-----------------------------

deletion	search time + $O(1)$	double linked list
----------	----------------------	--------------------

search-(worst)	$O(n)$	all keys in same slot
----------------	--------	-----------------------

unsuccessful search (average)	$O(1+\alpha)$	avg length of list = α
-------------------------------	---------------	-------------------------------

average case analysis

assume simple uniform hashing
