

Basic Networking Fundamentals	OSI Model	TCP/IP Command Line Tools (Windows)	Wireless Networking
Types of Networks	Communication Standards	IPCONFIG / ARP / ROUTE	Benefits of Wireless Networking
Connections	TCP/IP Communication	PING / TRACERT / PATHPING	Wireless Access Point
Protocols	TCP/IP Protocol Suite	NETSTAT / NBSTAT / NSLOOKUP	Components of Wireless Access Point
IP Addressing	TCP/IP (DARPA) Model	TELNET / FTP / NETSH	Access Point Placement
Wired Network Media	Transport Layer Protocols - TCP	Name Resolution	Wireless Networking Standards
Twisted Pair	Three-Way Handshake	Host Names	Wireless Network Securing
Coaxial	Internet Layer Protocols	NetBIOS Names	Network Security
Fiber Optic	Communication Types	Name to IP Address Resolution	Firewalls
Plenum-Grade Cables	Access Methods	Name Resolution Process	Security Devices
Connectors	CSMA/CD	DHCP	Network Access Security
Wire Standards	IP Addressing	DORA (Discover, Offer, Request, Acknowledge)	User Authentication
Ethernet	IP Addressing Scheme Planning	DHCP in a Routed Network	Device Security
Standard Ethernet	IP Addressing Rules	Routing	Common Security Threats
Fast Ethernet	Classful IP Addressing	Routing Tables	IPv6 Fundamentals
Gigabit Ethernet	Private IP Addressing	Static Routing	Disadvantage of IPv4
Network Topologies	Public IP Addressing	Dynamic Routing	IPv6 Solutions
Physical Network Topologies	NAT (Network Address Translation)	Routing Protocols	Types of IPv6 Addresses (Unicast, Multicast, Anycast)
Bus Topology	Binary IP Addresses	Convergence	IPv4/IPv6 Compatibility
Star Topology	Inter-Networking	Remote Desktop Services (RDS)	
Ring Topology	Default Gateway	RDS Role Services	
Mesh Topology	Subnetting		
Hybrid Topology	Classless Interdomain Routing (CIDR)		
WAN Technologies			
VPNs			
VLANs
