

Assertions

should means "assert true"

should_not means "assert false"

file

```
describe file('/path/to/file') do
  #INode type
  it { should be_file } # or be_directory, or
  be_symlink
  it { should exist }
  #Permissions
  it { should be_owned_by 'username' }
  it { should be_grouped_into 'group name' }
  it { should be_mode 440 }
  it { should be_readable } # or be_writable or
  be_executable
  it { should be_readable_by( 'owner') } # or
  'group' or 'others'
  it { should be_readable_by_user(' username' ) }
  #Links
  if { should be_linked_to '/path /to /target'
  }

  #Contents
  its (:md5sum) { should eq '...' } # or, and
  rspec matcher
  its (:sha256sum) { should eq '...' }
  its (:size) { should < 1024 }
  its (:content) { should match /some pattern/ }
end
```
