

Attaching a Shell

Attaching a Bash shell to an already running container:

```
docker exec -it my_container /bin/bash
```

Most used

docker ps	List <i>running</i> containers
docker ps -a	List <i>all</i> containers
docker pull <image>	Pull <image>
docker images	List pulled (local) images
docker rmi <image>	Remove <image>

Blocks of <...> are just placeholders and need to be replaced with an actual value.

Publish Images

```
docker save <my_image> | ssh -C
user@my.remote.host.com docker load
```
