

Basic commands

make O=outputdir xyz_defconfig	Initialize outputdir based on xyz_defconfig
make menuconfig	Modify the configuration
make	Build
make savedefconfig	Save the configuration back to the original _defconfig

Directories

output/images	Location of built kernel, bootloader and root filesystem images
output/build	Directory where all components are built
output/staging	Headers and libraries of the cross-compilation toolchain and userspace packages
output/target/	Almost complete root filesystem for the target
output/host/	Host tools including the cross-compilation toolchain

Q&A section

Why?

Because

What?

A longer answer to my question. I.e., because because because

How?

Stop asking

One last time

```
#include <stdio.h>
int main(int argc, char *argv[])
{
    printf ("Hello \n");
}
```

This is a note.
