

Syntax Differences

Java

```
import wt.query.*;

QuerySpec qs = new QuerySpec(WTPart.class);
qs.appendWhere (VersionControlHelper
    .getSearchCondition(WTPart.class, true));

private String getName() {
    return this.name;
}

if (a) {
    doA();
}
else if (b) {
    doB();
}
else{
    doElse();
}

for (String str : list) {
    System.out.println(str)
}
```

Command Line Tricks

Start Jython

jython

Inspect interpreter
actively after running
script

jython -i my_script.py

Run command

jython -c 'print "Hello, World!"'

Interpreter Tricks

Underbar

>>>qr.nextElement()

"_" can be
used to
reuse the
last result
returned

...wt.part.WTPart:12345

>>> part = _

You can
save a
method
as a
variable

>>> save = PersistenceHelper.manager.save

>>> save(part)

in Jython:

```
for item in list:
    print item
```
