ASP .Net Core Default Project Templates Repo

Repos and Documentation provided by Microsoft

Step 1 - Folder Setup / File Creation

- <i>Custom TemplateDir</i>	Create a new directory where you want to locate your custom
Name	template files. Then create the
-- src	following folder structure inside it
--- Content

Step 1 - Folder Setup / File Creation (cont)

```
dotnet new sln -n slnFile eName
```

Using your console,
create a solution file
Inside the *src* directory

Step 1 - Folder Setup / File Creation (cont)

```
dotnet new mvc -o TemplateProjectName
```

In the Content
folder create
new project of
the type you
want to create
the template
from.
*The project
name is not
critical at this
point*

Step 1 - Folder Setup / File Creation (cont)

```
dotnet sln Foundatio nMV CwM ySQL.sln add Content\Files
VCw MySQL.c sproj
```

Step 2

Open your solution file and add the Project you created. Run this

command
from the
directory
your .sln
file is in.
Add your
project to
the sln
file
